STRABAG

Dear Hiring Manager,

Please accept this letter as an expression of my interest in the Computer Science working student position. I came across this fantastic opportunity, and I am confident that my additional pair of hands might be useful in driving innovation for different types of modern solution STRABAG drives to.

I believe to have picked up the skills required for the student work position. During my time in the university, I have interested myself in the course of computational physics with python, that involves applying several algorithms such as Euler-Richardson algorithm to model a classical helium atom or one of my favorites, Nagel-Schreckenberg algorithm to model traffic flow with the use of cellular automata.

In addition, I participate in J-Robotics projects that involves working with circuits and actuator ran in the interface of Arduino to solve mechanical issues such as light sensors for vehicle parking.

With all this said, I believe this internship to be a top-notch professional atmosphere to launch my future career. With an opportunity to work in a job that is very practical and methodical, I intend to harness creativity and hard work

While my attached CV and cover letter will give you an outline of my abilities, a personal meeting allows me to explain how I can contribute as an intern. I look forward to discussing the possibilities to service your target goals. Thank you for your time and consideration.

Sincerely,
Ian Ruvuto Kampwanyi.
